

HEALTHY GROWING

AND LESS MOWING.

SHAW'S PREMIUM TURF FERTILIZER WITH CUTLESS®

Now you can have the best of both worlds: lush green turf, and lower maintenance and mowing costs. Shaw's Premium Turf fertilizer with **Cutless**® keeps lawns and golf courses beautiful, and hard-to-mow areas neat and well groomed. • Shaw's has combined a professional-quality 20-2-10 fertilizer with the unique chemistry of **Cutless** (flurprimidol). It's the only product available in this region that reduces growth rate without sacrificing development. • Shaw's Premium Turf fertilizer with **Cutless** is formulated especially for growth modification of warm and cool season turfgrass on lawns and golf courses. It's ideal on fairways, bunkers and tees, cart paths, slopes and other hard-to-mow areas. • It doesn't take a turf professional to see how well it works: you'll see the grass turn a richer, darker, healthier green within two weeks.

GROW MORE. CUT LESS.

Now healthy green turf takes less work.

Shaw's Premium Turf Fertilizer with Cutless® combines a high quality turf food with a highly effective, root-absorbed turf growth regulator all in an easy to apply granular fertilizer formulation.

Cutless (flurprimidol) is a turf growth regulator that reduces or slows vertical turf growth, but unlike other PGR products, it does not suppress lateral growth (see photos below). The result is less vertical growth without impacting lateral growth or the lateral recuperative ability of the turfgrass. This reduces mowing frequency, grass clippings, time and labor. In addition, research has also shown that plants treated with growth regulators can use up to 25% less water.

- Increases turf density
- Enhances turf color
- Less watering needed
- Overall improvement in turf quality
- *Poa annua* suppression/control
- Convenience of granular application
- Less mowing, fewer clippings, prevents scalping

8 WAIT - Fairway (2 applications)

Cutless 50W at 0.25 lbs ai/A (8 oz/A)

Cutless 50W at 0.5 lbs ai/A (16 oz/A)

Trimmit 2SC at 0.25 lbs ai/A (16 oz/A)

Trimmit 2SC at 0.5 lbs ai/A (32 oz/A)

Cut the growth of *Poa annua* and weeds.

Poa annua can't compete effectively with treated turfgrasses. Neither can crabgrass, goosegrass, foxtail, or annual sedges. And research has shown that Cutless inhibits the growth of a number of troublesome broad-leaf weeds and annual grasses, including prostate and spotted spurge, oxalis, clover, veronica, henbit and ground ivy.

Apply in the spring, and you're done.

One single application of Shaw's Premium Turf fertilizer with Cutless provides nutrients, growth regulation, and *Poa* suppression. The best time to treat is at the beginning of active spring growth, usually after the second mowing. Sequential applications can follow every four to eight weeks as needed. For complete use instructions, consult the label. Always read and follow label instructions.

Caring for turf is a Shaw's family tradition.

Since 1950, the Shaw family has been recognized for quality lawn and professional turf care products. Today, the third generation of the family is prepared to meet the challenges of the 21st century in environmental stewardship, quality packaging, and structural management programs.

Our main facilities are in northwest Indiana, near Chicago. Being on the outskirts of this world trade center, we're ideally positioned to buy high-quality ingredients at low cost and manufacture and ship products that provide the utmost in value for our customers.

We're proud of our past. Today, we're poised for the future, and ready to help you grow your best.

Shaw's Premium Turf fertilizer with Cutless gives you better control, and better-looking turf than competitive products.
