General Information

Shaw's[™] Team[®]200 Granules is a pre-emergence herbicide which is applied to established turfgrasses for the control of annual bluegrass (Poa annua), smooth and hairy crabgrass, goosegrass, (silver crabgrass or crofoot), barnyardgrass (water grass) and green and yellow foxtail. Shaw's[™] Team[®] 200 Granules also provides partial control of prostrate spurge (Euphorbia suprina), spotted spurge (Euphorbia maculata), creeping spurge (Euphorbia serpens), creeping woodsorrel (oxalis corniculata) and yellow woodsorrel (oxalis stricta). Shaw's[™] Team[®] 200 Granules controls susceptible annual weeds by killing their seed as they germinate.

The following settings are approximate for applying contents of this package. Settings are based on average walking speed. Reduce settings for slower speed and increase for higher speed. Check your spreader on 250 sq. ft. and adjust to apply ¼ of 1,000 sq. ft. rate. **Please Note:** These settings are furnished as a starting guide only.

Application Instructions

Apply Shaw's Team[®] Granules to the turf prior to the germination of weed grasses since Shaw's[™] Team[®] 200 Granules will not control established weeds. Shaw's[™] Team[®] Granules may thin established annual bluegrass (Poa annua) turf and fine leafed fescues at rates above 100 pounds per acre (2 pounds active ingredient). Shaw's[™] Team[®] 200 Granules should not be applied in the spring to turfgrass planted the previous fall. In Bermuda grass areas that have been over seeded with winter grasses, a spring application of Shaw's[™] Team[®] 200 Granules may thin the over seeded grasses. Because of varying cultural practices, Shaw's[™] Team[®] 200 should not be applied to newly sprigged areas of Bermuda grass, St. Augustine grass, Centipede grass or Zoysia grass until these turfs are well established.
