## Spend more time loving your lawn with Shaw's Fertilizer with SurfCote-6® for extended release.

- **Only one application needed**  
Spray applications can require five or more.
- **Innovative polymer resin coating**  
When temps go up, so do nutrient release and absorption.
- **Nitrogen released at a constant rate**  
Matches nutrient demand of your lawn without early-season flushes.
- **Nothing left behind**  
Polymer resin dissipates into natural compounds after complete release.

The patented polymer coating releases nitrogen in the same regular pattern that regulates turf demand for nitrogen.
